

1. Cleanse and Tone Face
 2. Apply three pumps of ageLOC Boost Activating Serum directly to device head.
 3. Treat one half of the face for one minute, then re-apply the Serum and treat the other half of the face for another minute.
 - Turn on device with it's touch-activated sensor on the handle. Swipe up from the bottom of the handle toward the ageLOC symbol. The lights should turn on and it will make a pulsing sound.
 - The device will pause after one minute after the first half-face treatment. This will give time to re-apply the product. It should vibrate 3 times and all LED lights should be blinking. When you are ready to start the second half-face treatment, swipe up on the handle again. (If there is no swipe, then it will time out and turn off after 2 minutes.)
 4. Massage in any remaining excess product.
 5. That's it—you're done! Follow up with your daily serum, moisturizer, and sunscreen. You'll immediately notice your skin feels more hydrated and softer.
