

Loss of Conductivity

If conductivity is lost, LED's will flash in continuous sets of five short flashes coupled with five vibrations.

- Apply more ageLOC Boost Activating Serum to the device's treatment surface.
- Swipe up to resume treatment.

Low Battery

The amber LED flashing repeatedly indicates there is not enough battery remaining to perform a treatment.

- Place the Device on the charger to charge the device.

If you are still having issues with your ageLOC Boost Device, contact customer service for further assistance.
